Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability

1. The questions whether the claimed invention appears to be novel, to involve an inventive step (to be non-obvious), or to be industrially applicable have not been examined in respect of:

**INTERNATIONAL PRELIMINARY
REPORT ON PATENTABILITY
(SEPARATE SHEET)**

International application No.

PCT/DK2004/000243

Reference is made to the following document:

D1: WO 01/49678 A (KROG JENSEN CHRISTIAN ; ROTTLAENDER MARIO
(DK); ANDERSEN KIM (DK); MIK) 12 July 2001 (2001-07-12)

Re Item III

Non-establishment of opinion with regard to novelty, inventive step and industrial applicability

Claim 16 relates to subject-matter considered by this Authority to be covered by the provisions of Rule 67.1(iv) PCT. Consequently, no opinion will be formulated with respect to the industrial applicability of the subject-matter of these claims (Article 34(4)(a)(I) PCT).

Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

The application fulfills the requirements of Article 33(2) and 33(3) PCT with respect to Novelty and Inventive Step.

The subject-matter of the present application is novel over D1 as the compounds of D1 are substituted at the nitrogen atom of the nitrogen containing heterocycle, whereas the compounds of the present application are unsubstituted at this position.

Document D1 is considered to be the closest prior art. This document discloses compounds of formula (I) which are used as 5-HT_{1A} receptor agonists.

The difference of these compounds with the compounds of the present application is that the nitrogen atom of the nitrogen containing ring is substituted in D1 whereas in the present application it is not. In D1 the nitrogen containing heterocycle can be either piperazines, piperidines or dihydropyridines in the first claim. There is no subclaim where only the dihydropyridine is claimed. The examples all comprise piperazines.

The problem to be solved by the applicant was to provide alternative compounds for use as SSRI's. A skilled person would not come to the solution proposed in the present application starting from D1 as he would have to leave out the substituent on the nitrogen atom and to choose from a list of three possible nitrogen containing heterocycles of which the dihydropyridine is actually not at all exemplified in D1.

The subject-matter of the present application is therefore considered to involve an inventive step over D1.
